ENVIRONMENTS**

ACOUSTIC BULLET RESISTANT LEAD LINED SECURITY  
STAINLESS STEEL RADIO FREQUENCY ACOUSTIC BUL  
BULLET RESISTANT LEAD LINED SECURITY STAINLESS

[www.ambico.com](http://www.ambico.com)

***AMBICO manufactures performance leading door and frame products designed specifically for the built, health care environment. In business for over 60 years, AMBICO anticipates the ever-changing challenges of increased security, patient privacy, microbial contamination as well as containment of radio wave and radiation interference in hospitals and clinics.***

### **ACOUSTIC DOORS & FRAMES**

- Acoustic assemblies are independently tested, achieving outstanding sound transmission loss in health care facilities, where speech privacy is required. Acoustic assemblies abate the disquieting noise inherent in most hospital environments
- AMBICO stocks door panels with either a wood veneer or a steel face. Unwanted noise will be reduced when our doors are used with our heavy gauge, pressed steel frames and engineered perimeter and bottom seals
- Fire labeled products have been tested by independent laboratories and are designed for use with conventional architectural hardware

### **BULLET RESISTANT DOORS & FRAMES**

- AMBICO bullet resistant doors and frames provide an unparalleled level of security for personnel and patients in ERs and mental health areas
- Whether doors are required in steel or in wood, our independently tested products are certified to resist attack ranging from small arms handguns to military assault rifles
- A range of wood veneers is readily available. Our steel door and steel frame assemblies are kept in stock and are able to operate using conventional builders hardware

## **SPECIALIZED DOORS & FRAMES FOR HEALTH CARE ENVIRONMENTS**

### **LEAD LINED AND RADIO FREQUENCY DOORS & FRAMES**

- Useful in conventional X-Ray rooms, PET scan theatres or modern Cyberknife clinics, a demanding requirement exists for the containment of radiation within treatment areas as well as for the protection from radio wave interference

- AMBICO lead-lined assemblies combine protection against radiation with the appearance of standard door and frame products
- Our radio frequency “RF” and electromagnetic interference “EMI” door and frame assemblies provide operational certainty when combined with complementary constructed rooms

### **SECURITY WOOD DOORS & STEEL FRAMES**

- AMBICO offers state-of-the-art security doors and frames where patient or personnel security is a key concern
- Door and frame assemblies have been field tested and laboratory tested to the demanding security requirements of HMMA as well as ASTM. This includes resistance to physical attack
- Security assemblies interface with conventional heavy-weight builders hardware. Wood face veneers can be matched to the overall building standard

### **STAINLESS STEEL DOORS & FRAMES**

- For use in healthcare facilities, where there is a demand for an extremely high level of cleanliness
- Frames are readily available for use in ICU and operating room environments
- Fire labeled products have been tested by independent laboratories and can be used with conventional architectural hardware
- Products can be custom designed and produced in a range of alloys including #304 and #316
