StormPro® Multi-Point Tornado Resistant Assembly UL Classified to ICC500 - 2014

In areas subject to extreme wind events, building owners, school and hospital administrators, neighborhood associations, and others responsible for public safety need safe rooms designed to meet ICC 500-2014 requirements to protect occupants.

Heavy duty anchoring, steel reinforcing and hardware components firmly secure the Ceco Door StormPro door within the frame.

StormPro® tornado resistant flush and glazed assemblies prepped for SARGENT FM7300 Series or Corbin Russwin FE6600 multi-point locks are UL classified to ICC-500 (2014) and comply to FEMA P-320 (2014) and P-361 (2015) for residential and community shelters. These openings carry a UL certification label.

Corbin Russwin FE6600 and SARGENT FM7300 concealed vertical rods, top and bottom bolts, and mortise lock body cassette must be factory installed in a Ceco StormPro door. All other hardware components are shipped directly from SARGENT or Corbin Russwin and must be installed by a factory trained installer. Important: do not remove any hardware blocking or filler plates in the door or the frame until the mortise lock is ready to be installed.

Ceco Door continues to be the leader in providing windstorm solutions designed to help protect property and lives.
