

The 833 series is a high-protection, compact, vehicle disabling wedge barrier. An economical alternative to deep mounted automated bollards, the unit is shallow mounted, powered by an electric, hydraulic or manual drive system and can be used in standalone or array configurations. Designed to control vehicle traffic, a unitary shallow mount system is engineered to stop an unauthorized vehicle up to 15,000 lbs. @ 30 mph .

## Features

- Maximum stopping power:
- Designed to meet ASTM F2656 M30 (15,000 lbs @ 30 mph ) [6,803.9 kg @ 48 km/hr] barrier
- Electric (-E), Hydraulic (-H) or Manual (-M) drive system
- Ultra shallow mount design
- Flush barrier surface when stowed
- Simplified, low maintenance design
- Superior corrosion protection for longterm durability
- Extreme vehicle weight capability

## Typical Applications

- Light - Government

Commercial and Military

- Parking Garage
- Universities
- Sports
- Embassies
- Municipalities
- Airports
