

RhinoGuard® 15/30 Street Furniture Range

Stylish, rated street furniture for
urban landscapes

Marshall's
Landscape Protection

The RhinoGuard® 15/30 Range

The RhinoGuard® 15/30 Street Furniture range has been developed to offer affordable protective street furniture solutions to a wide range of projects.

The range delivers IWA 14-1 rated options that can withstand a 1500kg vehicle travelling at 48kph. The stylish, protective pieces negate the need for bulky and obtrusive products, enabling creativity in the design of our public spaces.

The portfolio of products offer rated versions of the popular Distrikt, Festival, Geo, M3 and Urbain seats and benches, and the Natural Elements bin allowing for a multi-layered approach to perimeter protection for both present and future safety needs.

Benefits:

- Provides discreet crash protection that blends into the environment
- Simple to specify and cost effective
- Creates the ability to add protective and non-protective versions of the same product range onto urban landscape designs
- Doesn't require complex or deep foundations with no need for additional rebar unlike traditional HVM solutions
- Minimal cost to increase standard product to crash rated option
