

# ENTRAQUICK II MOBILE

## Proven reliability for mobile use

With our new EntraQuick Mobile II you can secure temporary construction sites and access roads. It is easy to assemble on site and a stability test under wind load confirms its reliability.

At the end of the operating period of the mobile version, you have the choice: either you install the existing EntraQuick II permanently on a foundation or you use it for your next mobile application and remain flexible.

Optional accessories such as signal devices and access control systems are available.

## Applications

- Temporary replacement for damaged door systems
- Flexible use on the construction site
- Existing gate systems can be extended modularly (e.g. for airlocks)
- Protection against unauthorised entry or passage
- Securing road construction to protect building materials and machines against theft
- Ideal for events and other activities
