

Turnstiles - perfect entrance control around the clock

Wherever smooth regulation or control of visitor flows is required, our Turnstiles are the ideal solution. With the help of modern control systems, access can be registered and controlled.

TurnSec 4.0

With our full-height turnstiles you control and manage visitor access. This keeps unauthorised persons out and at the same time provides unhindered access for authorised persons.

We offer the TurnSec 4.0 as a single and a multiple system. With the TurnSec Bicycle 4.0 you provide unhindered access to your property by bicycle.

Different options allow an individual adaptation to your specific requirements. We offer our TurnSec 4.0 with different roofs, such as a modern Makrolon roof. Furthermore, LED lighting, access release indicator and various access control elements increase user comfort.

Thanks to high-quality materials, stable steel frame construction and proven long-term corrosion protection TRI-PROTECT®, our turnstiles are very durable and weather-resistant.

In addition, our TurnSec 4.0 turnstiles are manufactured in a climate-neutral way along the entire value chain, thus underlining the sustainability of our products.
